Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

acid phosphatase (BC 3.1.3.2) precursor - rat
C;Species: Rattus norvegicus (Norway rat)
C;Date: 29-Jan.1990 #sequence_revision 29-Jan.1990 #text_change 09-Jul-2004
C;Accession: A33395
R;Himeno, M.; Fujita, H.; Noguchi, Y.; Kono, A.; Kato, K.
Biochem: Biophys. Res Commun. 162, 1044-1053, 1989
A;Title: Isolation and sequencing of a cDNA clone encoding acid phosphatase in rat liver
A;Reference number: A33395; MUD:89350910; PMID:2764916
A;Reference number: A33395
A;Status: preliminary
A;Molecule type: mRNA
A;Residues: 1-423 <HIM>A;Residues: 1-423 <HIM>A;Residues: 1-423 <HIM>A;Residues: 1-423 <HIM>A;Cross references: UNIPROT:P20611; UNIPARC:UPI0000131FEZ; GB:M27893; NID:g202933; PIDN:C;Superfamily: mammalian acid phosphatase
C;Superfamily: mammalian acid phosphoprotein; phosphoric monoester hydrolase
C;Superfamily: site: Arg #status predicted
F;42/Active site: His (phosphohistidine intermediate) #status predicted

Improving the nutritional value of phytate-containing foodstuffs, using phytase enzymes which catalyze the liberation of inorganic phosphate from Claim 1; Fig 1; 147pp; English. the phytates.

The present sequence is a phytase enzyme from Bscherichia coli B. The enzyme catalyses the liberation of inorganic phosphate from the phytate in phytate-containing foodstuffs and can thus be used to improve the nutritional value of phytate rich ingredients

biocompatible composition is effective upon oral consumption and release in the digestive tract of a subject. The dietary aids are useful for delivering enzymes, therapeutics, medicine and agents to an organism. The use of enzymes and other agents in digestive aids of livestock or domesticated animals not only improves the animal's health and life expectancy but also assists in increasing the health of livestock or the production of foodstuffs from livestock. The present sequence is

E. coli B phytase.

```
The patent discloses recombinant bacterial phytase from Escherichia colicity appA phytase. The enzyme has phytase activity and improved thermal colerance when compared with wild-type phytase. It has improved protease stability at low ph. The recombinant phytase. It has improved protease stability at low ph. The recombinant phytase is useful for improving the nutritional value of phytate-containing foodstuffs and subsequently improving the growth performance of an organism that consumes it, in treating animal digestive systems, in feed treatment processes and for in vitro purposes related to research, discovery and development. They are also used for generating recombinant digestive system life forms, for producting or manufacturing alcoholic and non-alcoholic drinks based on the use of moulds, grains and/or plants, in biopulping and bio- bleaching where a reduction in the use of enzionmentally harmful chemicals that are traditionally used in the pulp and paper industry is desired and in the reduction or possible elimination of the need for mineral cupplements, enzymes or therapeutic drugs for animals from the daily feed thus increasing the amount calories and nutrients present in the feed.

The present sequence is B. coll B phytase protein
                                                                                                                                                                               New bacterial phytase for e.g. improving the nutritional value of phytate -containing foodstuffs and subsequently improving the growth performance of an organism that consumes it, or in treating animal digestive systems.

ö

The invention relates to an isolated Escherichia coli polynucleotide encoding a phytase enzyme appearing as ADA19450 and having amino acids modification from WEBE. Q84W, A95P, K97C, S168E, R180Y, N25C or Y277D.

Also included the E. coli appa gene ADA1949 (or an oligonucleotide derived from it) or its mutant sequence ADA1945; expression vectors, containing foodstuff by contacting the phytate-containing foodstuff with a pure phytase enzyme mutacted phytase (where the phytase enzyme catalyzes containing foodstuff), a method to produce an animal feed containing a microbial phytase (comprising culturing the plant cell, plant part or converting the plant cells, plants or plant into a composition for animal (converting the plant cells, plants or plants or plant into a composition for animals (comprising the plant cells, plant parts or plants in admixture with a phytate-containing foodstuff), a method to ranimals (comprising to the animal the plant seed, plant cells, plant parts or plants in admixture with a phytate-containing foodstuff), a method to treat a human or an animal the plant seed, plant cells, plant parts or plants of a transgenic plant whose genome contain an expression system which expresses a nucleotide sequence containing a phytase enzyme, a transgenic non-human organism whose genome comprising a hytase enzyme, a transgenic non-human organism whose genome comprising a heterologous nucleic acid sequence encoding a phytase activity. The phytate enzyme is useful for improving the nutritional value of phytate-containing foodstuff, in the production of animal feed and for enhancing digestion in humans and animals. The

ADA19446 standard; protein; 440 AA

The invention relates to a method for producing phytase that involves providing a nucleic acid encoding phytase derived from a bacteria, and expressing the nucleic acid in a yeast under conditions that allow expressing the nucleic acid in a yeast under conditions that allow expression of the enzyme in the yeast. The invention also relates to modified phytase enzyme which has improved thermal tolerance and protease stability at low ph! The phytase enzyme can be used in foodstuffs to improve the feeding value of phytate rich ingredients, and in diet of numerous animals including mammals, fowls and fishes, commercially significant mammals such as chicken, ducks, doves, parrot, etc., commercially farmed fish such as chicken, ducks, doves, parrot, etc., commercially farmed fish such as suppy, zebrafish, molly, swordtall, etc., in dough making and baking, in dietary aids for animals. The method provides easy manufacture of the active ingredient loaded biocompatible composition, higher yields and loading efficiency. The phytase incorporated in to the dietary aid is safe for animals. The present sequence is Escherichia coli B phytase enzyme.
                                                                                                                                                                                                                                           Producing phytase, involves providing nucleic acid derived from bacteria encoding polypeptide having phytase activity, and expressing nucleic acid in yeast.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 MKAILIPPESLLIPLTPQSARAQSEPELKLESVVIVSRHGVRAPTKATQLMQDVTPDAWP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is that of the Escherichia coll B phytase. The present invention relates to a novel formulation, comprising at least one polypeptide having phytase activity, where the polypeptide is a modified sequence (ARE75421) derived from the Escherichia coll K-12 appà phytase (ARE75419). The modification of the enzyme, comprising a series of mutations, improves the thermal tolerance and protease stability of the protein. The specification also claims a pharmaceutical composition; a kit; an immobilized phytase; a fertilizer or soil additive; a liquid supplement for preventing muscle cramps; a hydrating agent; a tissue culture or cell culture media; and a plant food additive, all comprising nutrient availability in an environment a sample by degrading environmental phytic acid. The novel enzyme is a diecary supplement useful for treating, preventing or reversing osteoporosis or

bone loss, and preventing muscle cramps. The liquid supplement is useful for preventing muscle cramps. The method is useful for reducing pollution and increasing nutrient availability in an environment or environmental sample by degrading environmental phytic acid, where the environment environment comprises a soil or a body of water. The immobilized phytase is useful in foodstuffs for improving the feeding value of

                                                                                                                                                                                                                                                                               용
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a method for producing phytase that involves providing a nucleic acid encoding phytase derived from a bacteria, and expressing the nucleic acid in a yeast under conditions that allow expression of the enzyme in the yeast. The invention also relates to modified phytase enzyme in the yeast. The invention also relates to modified phytase enzyme can be used in foodsurifs to improve the feeding value of phytase enzyme can be used in foodsurifs to improve the feeding value of phytase rich ingredients, and in diet of numerous animals including mammals, fowls and fishes, commercially significant ammals such as pigs, goats, laboratory rodents, commercially significant avian species such as guppy, zebrafish, molly, swordtail, commercially farmed fish such as guppy, zebrafish, molly, swordtail, composition, higher yields and loading efficiency. The phytase incorporated in to the dietary aid is safe for animals. The present sequence is Becherichia coli W phytase mutant enzyme. Note: The present sequence is Becherichia coli W phytase mutant enzyme. Note: The present sequence is not shown in the specification but has been derived from Escherichia coli B phytase ADOSO292.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

The invention relates to a method for producing phytase that involves providing a nucleic acid encoding phytase derived from a bacteria, and expressing the nucleic acid in a yeast under conditions that allow cappression of the enzyme in the yeast. The invention also relates to modified phytase enzyme which has improved thermal tolerance and protease stability at low pit. The phytase enzyme can be used in foodstuffs to improve the feeding value of phytase enzyme can be used in foodstuffs to improve the feeding value of phytase enzyme and fishes, commercially commercial including mammals, fowls and fishes, commercially significant mammals such as pigs, goats, laboratory rodents, commercially significant mammals such as pigs, goats, laboratory rodents, commercially farmed fish such as guppy, zebrafish, molly, swordtail, significant avian species such as chicken, ducks, doves, parrot, etc., in dough making and baking, in dietary aids for animals. The method provides easy manufacture of the active ingredient loaded biocompatible composition, higher yields and loading efficiency. The phytase composition, higher yields and loading efficiency. The present sequence is Rangaroo rat Escherichia coli phytase mutant enzyme. Note:

The present sequence is not shown in the specification but has been constructed from Escherichia coli B phytase sequence ADOS0292.
Producing phytase, involves providing nucleic acid derived from bacteria encoding polypeptide having phytase activity, and expressing nucleic acid
                                                                                                                         Disclosure; Page; 74pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 proteins, in this case pigs which expresses phytase in the salivary gland. Low phytase production levels result in phytate in the diet lexcreted and causing phosphorus contamination in water, as well as reducing the growth of animals. The invention provides a number of transgenes containing the E. coli APPA phytase coding sequence. (Upp on 12-SEP-2003 to standardise OS field)

Low phytase production levels result in phytate in the diet being excreted and causing phosphorus contamination in water, as well as reducing the growth of animals. The invention provides a number of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (Updated

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AFAAGLAPDCAITVHTQADTSSPDPLFNPLKTGVCQLDNANVTDAILSRAGGSIADFTGH 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             proteins, in this case pigs which expresses phytase in the salivary gland. Low phytase production levels result in phytate in the diet being excreted and causing phosphorus contamination in water, as well as reducing the growth of animals. The invention provides a number of transgenes containing the E. coli APPA phytase coding sequence. (Updated on 12-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Transgenic animal; salivary protein; phytase; phosphorus; animal growth;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention provides transgenic animals which produce desired

                                                                                                                                                                                Gape
              proteins, in this case pigs which expresses phytase in the salivary gland. Low phytase production levels result in phytate in the diet excreted and causing phosphorus contamination in water, as well as reducing the growth of animals. The invention provides a number of transgenes containing the E. coli APPA phytase coding sequence. (Upp on 12-SEP-2003 to standardise OS field)
 present invention provides transgenic animals which produce
